

Computer Graphics

We offer two different Computer Graphics classes at South. In the first class “Computer Graphics A”, you will learn about graphic techniques such as editing, retouching and drawing using Adobe Photoshop and Illustrator, as well as advanced graphic editing. The second class “Computer Graphics B” is a graphic design class where you will learn about layout, font, graphics and incorporate those techniques into printed and web-based media. It is highly recommended that you take CGA before taking CGB.
