## Upcoming Events

Pumpkin Patch Trip- 10/19

Photography Walking Trips  
around GPA

Cooking Unit

Friendship Bracelets

Tandy Leather

## Important Reminders

The week of Conferences, there will only be **ONE** day of After School Program.

**No School 10/15 or 10/18**

**No ASP 10/20 or 10/21**

**Parent Teacher Conferences**

**10/20, 10/21, 10/22**

# STEALTH NEWS

## September Highlights in The Afterschool Program

## Photographers in Training

### Students capture images of the GREAT outdoors.

Kindergarten through fifth grade students in the STEALTH After School Program travel to The Great Plains Nature Center on Tuesday, September 28, 2021. The STEALTH After School Program provides kindergarten through fifth grade students opportunities to learn more about science, technology, engineering, art, leadership, tutoring, and health. Over the past few weeks, students have learned about Animals in the Wild. Some students in the second through fifth grades were able to take photos while they attended the trip. Here are a few of the photos selected from the photographers. *Story by M. Floro*

## Tanganyika Visit

On September 14<sup>th</sup>, students in the STEALTH Program meet a sloth, Chewbacca. The Three-toed sloth arrived in a what appeared to be a garbage can or recess bucket. His handler reached in and the sloth reached up to greet her like a baby reaches up to greet their parent. “I like how the hair on the sloth grew from his belly to his back and how it can hang upside down,” Jeremiah Johnson, 4<sup>th</sup>. In addition to meeting a sloth, students met a legless lizard, a tortoise, and a bearded dragon.

## Beaver Dams

Aryck Anderson, Nyla Wharry, and Zachariah Reed pose with the beaver dams they made. Beaver dams were made by using sticks, mud, rocks, and chunks of straw.

Zachariah Reed said, “I loved building the dams by using mud,” Major Murdock said, “I liked building the dams because I was with my brothers and it was really fun. I broke up the sticks.” Nyla Wharry said, “We gathered our materials and Aryck used his skills to scrape one of the sticks to make the stick look like something a beaver would make.” Taelur Reed said, “I liked learning about beavers and making dams. I like how the mud is used to keep the sticks connected.”
